Experience

Engineer, Scrum Master

🏢 Avito
📅 10/2016 - 04/2022
📍 Moscow, Russia

Avito – the world's most visited classified ads website.

I was working on different products and projects (mostly with a focus on professional seller experience) on several platforms (avito.ru, pro.avito.ru, and their mobile versions).

My activity:

- As a **front-end engineer**, I wrote easy-to-support code using JS, Typescript, React, Redux, Jest, etc
- As a **delivery lead** for some OKRs, I helped the discovery team to decompose projects by achievable goals, provided roadmaps and set plans for the dev team, helped to solve all problems and finally made releases happen on time
- As a **technical owner** of one of the frontend-platforms, I provided reviews, solved other teams' concerns, managed the tech-backlog
- As a **scrum master**, I created and improved various agile tools, scenarios, and checklists, contributed to the company's agile community

Latest projects:

- Redesigning the user's profile page + getting rid of the legacy
- Phone management flow on the user's settings page
- User self-service statistics page

Junior Frontend Developer

🏢 Ostrovok (hotel booking service)
📅 08/2016 - 10/2016
📍 Moscow, Russia

Fixed several bugs and implemented small features using google/closure (then fell under the staffing reduction).

HTML/CSS Developer

🏢 Rutorika Digital Solutions
📅 05/2016 - 08/2016
📍 Krasnodar, Russia

Converted several designs to websites using Jade (Pug), BEM, and Gulp.

Irrelevant experience (Marketing)

📅 2006 - 2016
📍 Krasnodar, Russia

JS community

👤 HTML Academy
📅 2017 - 2018
Mentored 5 students (HTML, CSS).

Skills

HTML CSS JavaScript Typescript React Redux Effector Jest ESLint Git TDD ATDD Scrum Kanban
OKR Jira

English B2, Polish A1, Russian native

What do I like most:

- to eat-my-own-dog-food – to be an active user of what I am creating
- to work in the self-sufficient team
- small iterations of releases and low time to market
- transparency on all levels
- to implement good team practices: zero bug policy, working in pairs (research/code/testing), Acceptance Test Driven Development (ATDD), etc
- when I can improve some developer experience and work on the app's performance metrics or accessibility

Education

Advanced React Course

 javascript.info
 05/2021

TypeScript Course
